

Jannael Orlando | Software Developer

Software developer, professional and open-source enthusiast.

Ciudad de México, México | orlandojannael@gmail.com | +52 56 3368 3040

LinkedIn: <https://www.linkedin.com/in/jannael-orlando-44604a349>

CORE SKILLS

Python | OpenCV | Raspberry Pi | Arduino | TypeScript | Bun | Astro | Zod | Puppeteer | Vitest | GitHub Actions | Tailwind CSS | Cloudflare Pages | AWS | Amazon S3 | Amazon EC2 | AWS Lambda | CloudFront | Claude Code | Anthropic | React | JavaScript | Vite

PROFESSIONAL EXPERIENCE

Dual Education Student | Universidad Tecnológica Fidel Velázquez

08/23 - 08/24

Developed automation and hardware/software integration projects, culminating in a smart greenhouse controlled by computer vision.

- **Greenhouse with computer vision:** Developed a plant monitoring system with Python and OpenCV on Raspberry Pi, controlling temperature and humidity via serial communication with Arduino.
- **Real-time control interface:** Built a GUI with Tkinter to operate greenhouse sensors and actuators, allowing environment parameter adjustments without manual intervention.
- **RetoPY international contest:** Represented the institution in an international Python programming contest, obtaining first place as team leader.

PROJECTS

Devsync

Tool to sync all your job-seeking documents: GitHub, LinkedIn, CV (Harvard format), portfolio, and academic history.

- **Hexagonal architecture:** Each command's logic (init, build, create-template) is isolated in domain/app/infra layers, sharing common infrastructure through the mixin pattern.
- **Single source of truth:** A single DEVSYNC.json keeps your PDF CV, GitHub profile, LinkedIn summary, and academic history in sync.
- **PDF generation with Puppeteer:** Renders the CV as HTML and exports it to PDF per language, with no external dependencies or third-party services.
- **Native internationalization:** Each section supports multiple languages; the build generates separate artifacts (CV, LinkedIn) per configured lang.
- **GitHub Actions:** A ready-to-use workflow detects changes in DEVSYNC.json and automatically regenerates and commits all artifacts.
- **Template system:** Create and publish fully customizable templates on GitHub; anyone can initialize their portfolio from them with a single command.
- **Zod validation:** The DEVSYNC.json schema is typed and validated with descriptive errors for each required profile field.

- **Supply chain security:** 3-day minimumReleaseAge in bunfig.toml blocks recently published packages, protecting against dependency chain attacks.

Demo: <https://devsync.work>

Glinter

Tool to improve the development experience using git.

- **Transparent proxy:** Uses Bun.spawn with stdio: 'inherit' to connect Git streams directly to the terminal, preserving colors, interactive prompts, and the full native UX.
- **Hexagonal architecture:** Each command (add, commit, switch, setup) is organized into independent domain/app/infra layers, with interfaces as ports and Bun as the adapter.
- **Interactive staging:** g add without arguments opens a multiselect with @clack/prompts showing only modified files, automatically filtering .env and node_modules.
- **Porcelain parsing:** Parses git status --porcelain -z with NUL splitting for 100% reliable file detection across Git versions, system languages, and special characters.
- **Interactive switch:** g switch lists local and remote branches in a navigable selector, running checkout without needing to remember the exact branch name.
- **Cross-platform alias:** The setup command configures the g alias on Unix and Windows automatically, with separate infrastructure implementations per OS.

EDUCATION

Mechatronics Technician | CECYTEM

MM/YY - MM/YY

- **International Python contest:** Won a contest as leader of a two-person team solving Python challenges.
- **National top GPA:** Recognized as the best GPA nationwide in my major.

CERTIFICATIONS

AWS Cloud Practitioner Essentials Santander

Credential

<https://github.com/jannael/jannael/raw/main/academics/Constancia%20AWS%20Cloud%20Practitioner%20Essentials.pdf>

- **AWS essentials:** Managing AWS services such as IAM, S3, EC2, RDS, CloudFront, Lambda, etc.
- **CloudFront:** Using CloudFront to distribute static content worldwide for instant loading.
- **Billing:** Using the Billing service to manage and monitor AWS resource costs.

Claude Code in Action

Credential <https://github.com/jannael/jannael/raw/main/academics/Claude%20code%20in%20action.pdf>

- **Agentic coding:** Using Claude Code to delegate complex development tasks, from implementation to refactoring, with full project context.
- **Prompt engineering:** Structuring effective instructions to obtain precise and consistent results in automated development workflows.

- **AI workflows:** Integrating Claude Code into the real development cycle, combining code review, generation, and assisted debugging.

Academia STEM Participation Certificate - RetoPY

Credential

<https://github.com/jannael/jannael/raw/main/academics/Constacia%20de%20Participacion%20Academia%20STEM.pdf>

- **RetoPY:** International programming contest organized by Academia STEM, where I obtained first place.

React Junior Developer - Certificates.dev

Credential <https://github.com/jannael/jannael/raw/main/academics/React%20Junior%20Developer.pdf>

- **React essentials:** Mastering JSX, component composition, props, children, and the fundamental rules of React's component model.
- **Hooks and state:** Managing state with useState, understanding the render cycle, state snapshots, and when to use useRef to avoid unnecessary re-renders.
- **Forms and events:** Handling interactions with React's event system, implementing controlled and uncontrolled forms.
